BAG TROLLEY

Some types of waste may weigh heavily in the bag and for faster and easier transportation of the full bags, we offer you a trolley designed for the dimensions of TOM.

EFFORTLESS BAG SWITCH

The solid metal trolley is robust but still light and convenient to handle. The bin is easily attached to the trolley with a pin. When TOM alerts you that the bin is full, you effortlessly pull out the trolley and the entire bin with the full bag inside will follow.

Just roll it away from TOM to your waste storage behind the scenes and replace the bag. Return with the bin, push it in and leave the trolley inside TOM for the next bag switch.

A pin keeps the bin attached to the trolley
